DB vs Wiki

- DB needs MS Access, Wiki only browser
- DB can be seen only by one user, Wiki by everybody
- Wiki is linkable on the EE site
- All partners can edit and restore previous versions
- DB can work offline, Wiki not but you can make drafts offline then paste them later
- Wiki can be made nicer with pictures, working links etc...
- Could be updated in the future (I am intentioned to add pages for new initiatives laws etc.)
- DB produces reports and wiki not but they need intensive editing anyway

What we really need

- 50-100 completed records (discussion)
- Records must be edited and commented in terms of relevance to project completeness and transferability
- Records must represent examples of the five involved regions (not only city, in the case of JG)
